

Inshore Marine Protected Area and Priority Marine Features Consultation

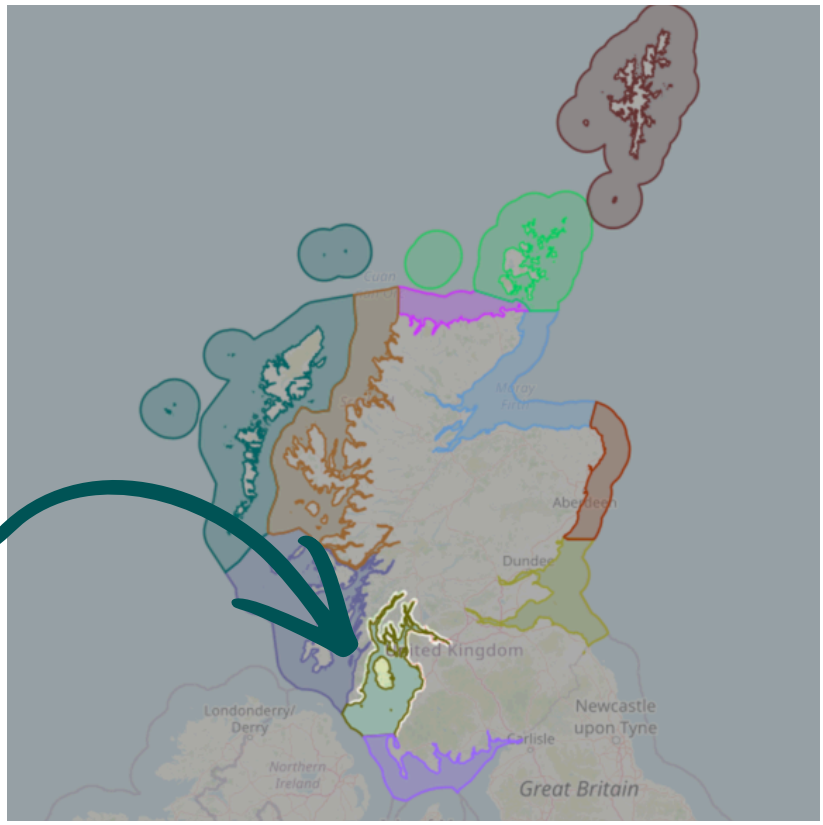

Clyde

11/11/2026

Introduction

Here you will find a briefing manual for the Proposed Fisheries Management Measures for Inshore Marine Protected Areas (MPAs) and Proposed Priority Marine Feature (PMF) Management Areas within the Clyde marine region.

The Clyde includes the Clyde Estuary, four additional estuaries, the eight Clyde sea lochs, including Loch Fyne and Loch Long, and the Firth of Clyde. It also covers numerous islands, including Arran, Bute and the Cumbraes. Landscapes and seascapes range from the wide sandy beaches on the Ayrshire coast, and the mudflats and saltmarshes of the industrialised Clyde estuary near Glasgow, to the deep sea lochs of Argyll.

Clyde Marine Region

The Our Seas Coalition

The Our Seas coalition represents over 170 organisations, each with its own voice for the sea. We are united by a shared vision of greater protection for Scotland's inshore environment, however, individual members bring their own regional knowledge, priorities and perspectives on what that protection should look like. Consequently, our members will have their own individual views on the options presented within the consultation.

Our Seas encourage you to reach out to members in your area to learn more about their individual position.

The Consultation

After almost a decade of delay, the Scottish Government has finally launched its consultation on the future protection of inshore marine habitats and species. You can view it here.

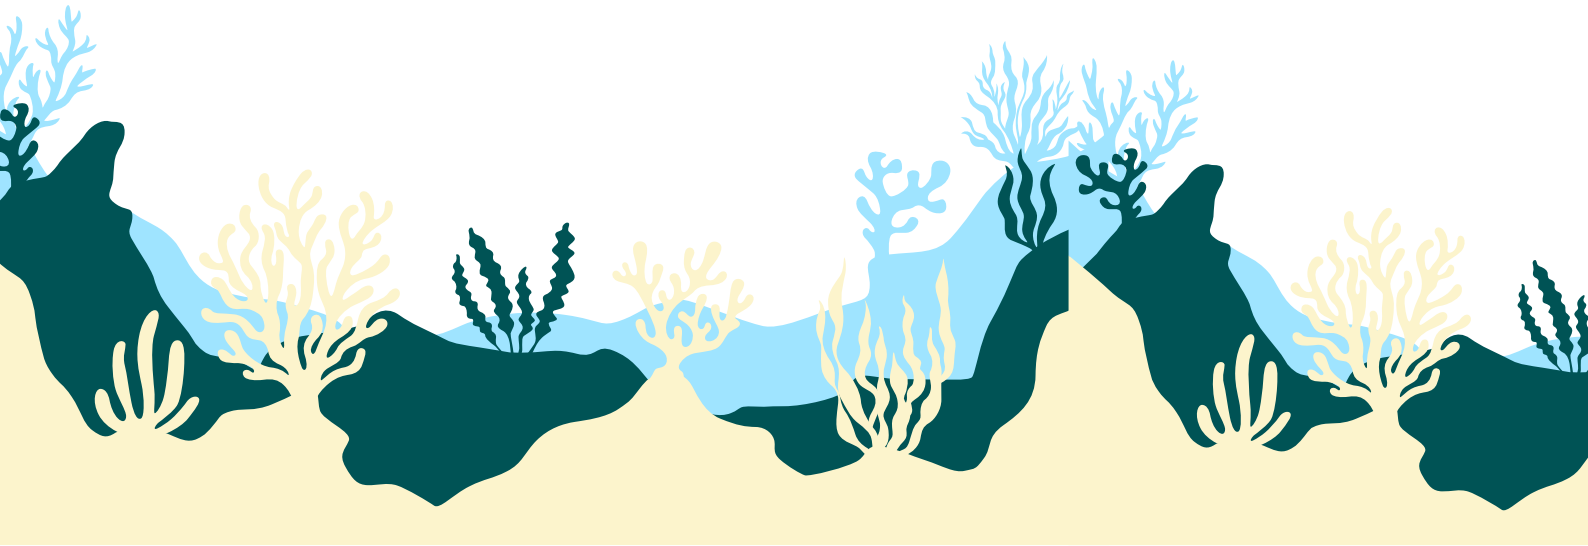

This is the chance for real protection to be implemented in Scotland's inshore waters after over 10 years of simply designation.

Within this consultation, the Scottish Government is asking for the public's opinion on proposed fisheries management measures for both sites and areas, where sites include: NCMPAs, SACs and SPAs and areas include locations where the 11 Priority Marine Features features have been identified outside MPAs.

In the Clyde, the consultation includes proposed fisheries management measures for:

1 NCMPAs | *0 SACs* | *1 SPAs* | *9 PMF areas*

This briefing will outline the sites that are designated to protect a seabed feature that is threatened by bottom-towed gear, in line with the asks of Our Seas. For more information on other sites in your area, follow this link!

MPA Sites Proposed Options

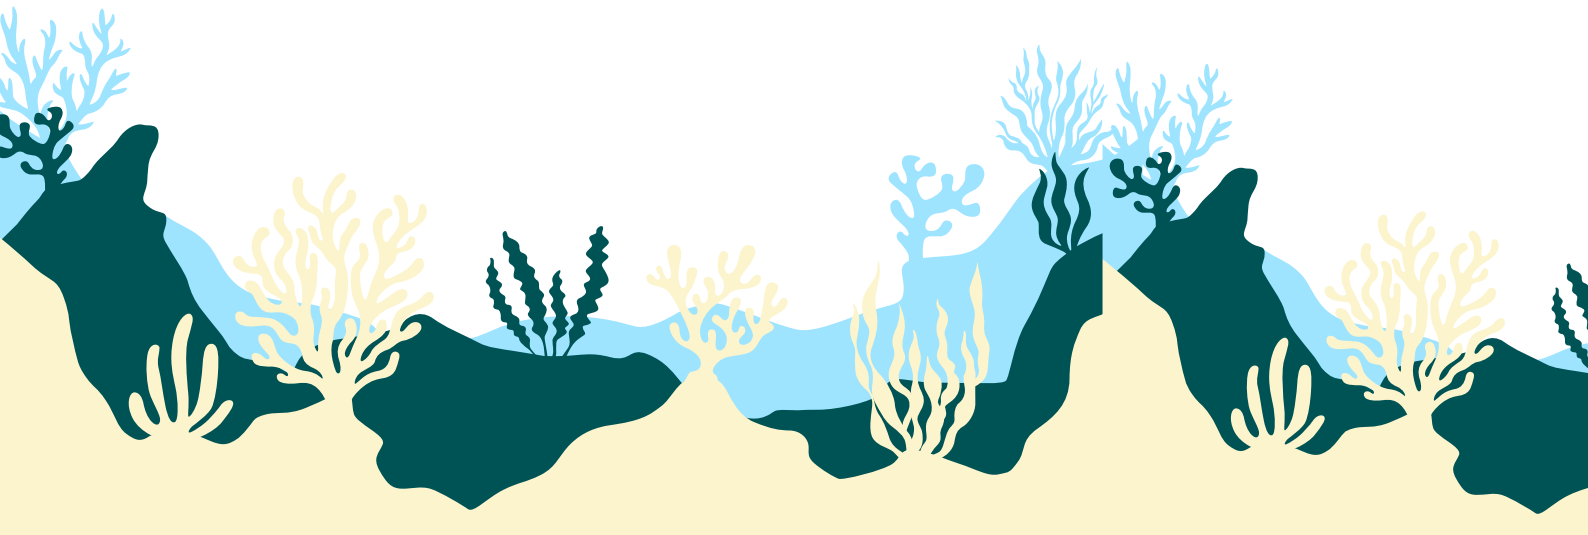

For the majority of the **MPA sites**, 2 options will be proposed. In some cases, only 1 option is proposed due to the conservation objectives of that site.

Option 1 - Zonal measures: Rules for specific fishing gears that may apply seasonally or to vessels above a certain engine power.

Option 2 - Full site measures: Rules on specific fishing gears that apply across the whole site all year round.

Other: If you disagree with both options, you can select 'Other' and explain your reasons in the comments box.

Relevant Questions in this Region: Sites: Q107 - 109

Our Seas Coalition's Position

MPAs

Protect all seabed MPAs from bottom trawling and dredging to support healthy marine ecosystems, coastal communities and sustainable livelihoods.

If you agree, you should submit a response, as follows;

- Support **Option 2** for all the MPA seabed sites that propose a **full site closure to all bottom towed fishing gear**. This would mean that more damaging fishing practices such as bottom trawling and scallop dredging will not be allowed in sites designated to protect the seabed, allowing seabed habitats to recover.

- There are 3 sites that have a seabed feature designated which do not propose full site closure to all bottom towed gear, and Our Seas will be calling for stronger protections for these sites in the form of full site closure to all bottom towed gear. These are, Clyde Sea Sill NCMPA, Moine Mor SAC and North East Lewis NCMPA.

Why?

Because the sedbed should be protected. Bottom trawling and dredging physically disturb the seabed, damaging species and reducing the abundance and diversity of marine life. Closing seabed MPAs to bottom-towed fishing allows seabed habitats to recover and provides the **strongest protection** for the features the MPAs were designated to conserve.

What protection can look like...

On the Isle of Arran, Scotland's only No Take Zone and wider South Arran MPA show how effective marine protection can be, with bottom trawling and dredging restrictions helping to protect and restore the seabed.

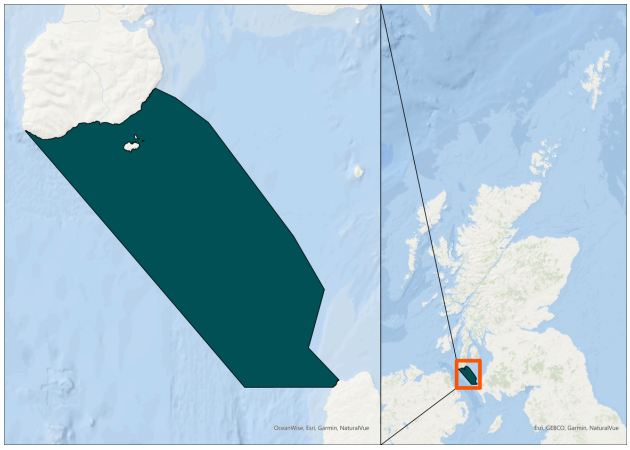

Research has found increases in king scallop and lobster numbers, greater marine biodiversity and healthier habitats, while supporting local communities through activities such as diving, snorkelling and commercial scallop diving. Go to COAST's website to read more.

Clyde Sea Sill NCMPA

CLYDE

The Clyde Sea Sill NCMPA extends from the Mull of Kintyre to Corsewall Point on the Rhins of Galloway and is characterised by a prominent seabed sill where the North Channel meets the Firth of Clyde.

Protected Features

Black Guillemot
In unfavourable condition at the Clyde Sea Sill NCMPA.

THREATS
Sensitive to disturbance from fishing vessels, particularly during the breeding season when they nest close to shore

Circalittoral sand and mixed sediment communities
Support a large number of species living on and within the seabed.

THREATS
Bottom towed fishing practises that damage the seabed and their habitat.

Our Seas recommends:

NEITHER OPTION

For this site

Neither Option 1 or Option 2 fully closes this site to bottom towed fishing gear. Therefore we **reject both options and propose full closure to bottom towed gear.** This will protect both features, particularly circalittoral sand and mixed sediment communities, while also providing benefits for the wider ecosystem.

Have your say!

Read more about this site and the other option here

Respond by email by filling in the form on our website, answering Q.107 - Q.109 and emailing it to **marine_biodiversity@gov.scot**

PMF Areas Proposed Options

For the majority of **PMF areas**, 2 options will be proposed, in some cases, only 1 option is proposed.

Both options restrict bottom-towed fishing gear. The consultation is about the size of the area where these restrictions will apply.

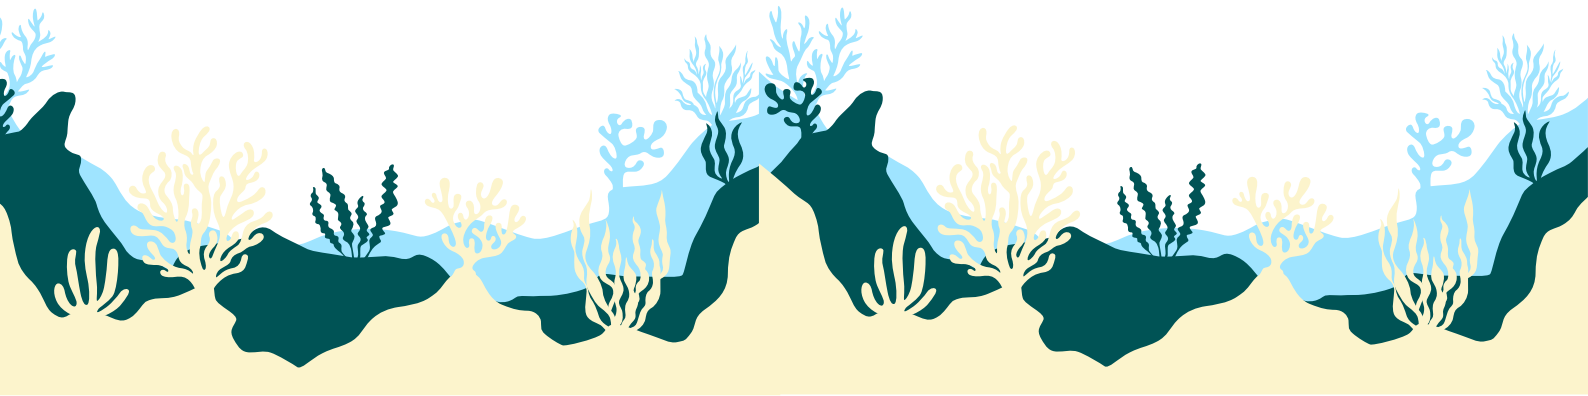

Option 1 - Smaller protected area

Option 2 – Larger protected area: Includes a buffer around the PMF, although the difference from Option 1 is small.

Other: If you disagree with both options, you can select ‘Other’ and explain your reasons in the comments box.

Both proposed options for are not adequate because:

- The areas are **not large enough** to provide real protection that is truly enforceable.
- Many populations of the 11 PMFs are **found outwith the proposed areas and therefore have no protection.**

Our Seas Coalition's Position PMFs

Neither of the proposed PMF options will provide sufficient protections; they do not go far enough to help restore the seabed, allow marine ecosystems to recover or to support sustainable fisheries. We believe at least 30% of Scotland's inshore should be protected from more damaging fishing activities like bottom trawling and dredging.

If you agree, we suggest you submit a response as follows:

- Support **Option 2 at a minimum**. We then encourage you to also ask for at least **30% of Scotland's inshore waters to be protected** from the more damaging fishing activities like bottom trawling and dredging, in line with the coalition's ask of a **modern inshore limit adapted to the needs of each Scottish Marine Region.**

- If you want to go into more detail, Our Seas suggests this could look like:
    - In the West Highlands Marine Region no dredging or trawling within 3 nautical miles of shore.
    - In the Outer Hebrides Marine Region no dredging or trawling within 1 nautical mile of shore.
    - As Shetland has it's own Regulatory Order, leave it to to resolve it's own protection.
    - Throughout the rest of the Scottish Marine Regions, no dredging or trawling within 1 nautical mile or waters shallower than 45/50m.

PMF Areas: Qs 115 - 146

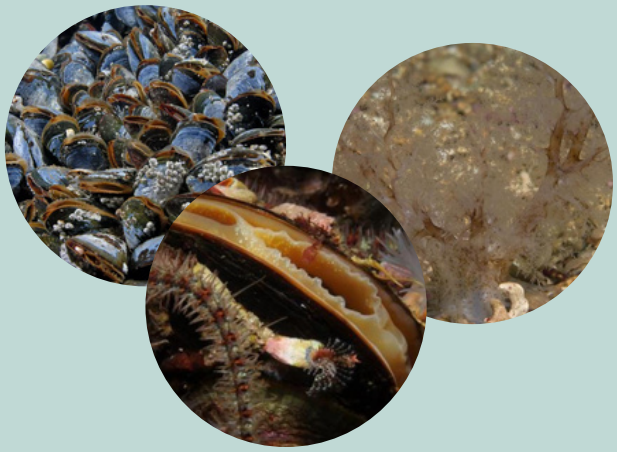

In this section, we will summarise the PMF management areas proposed for the Clyde. These are locations where populations of the 11 most vulnerable PMFs have been found outside the MPA network and where the Scottish Government are proposing protection from trawling and dredging. **Read the profile for each of these 11 PMFs here!**

If you agree that the proposals are not sufficient, answer Qs 115-146 as we have set out above.

Loch Long, Upper (Argyll)

Designated to protect:

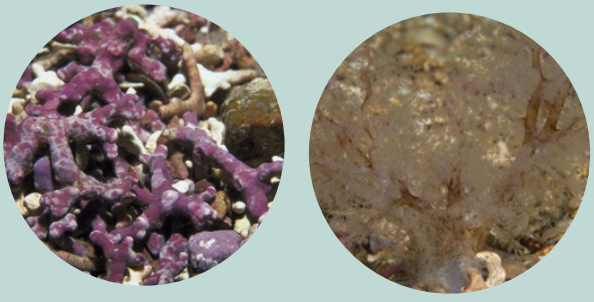

Blue mussel beds
Horse mussel beds
Maerl or coarse shell gravel with burrowing sea cucumbers.

Ardlamont Point (Cowal)

Designated to protect:

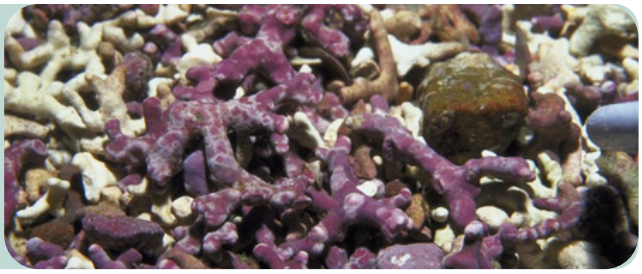

Maerl beds
Maerl or coarse shell gravel with burrowing sea cucumbers

Merkland (Arran)

Designated to protect:

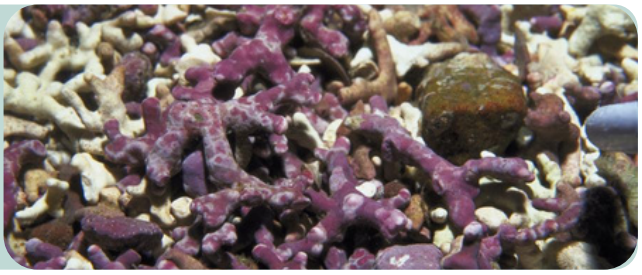

Maerl beds

Sannox (Arran)

Designated to protect:

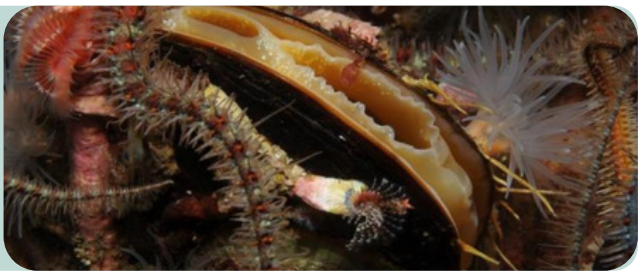

Maerl beds

Gourock (Inverclyde)

Designated to protect:

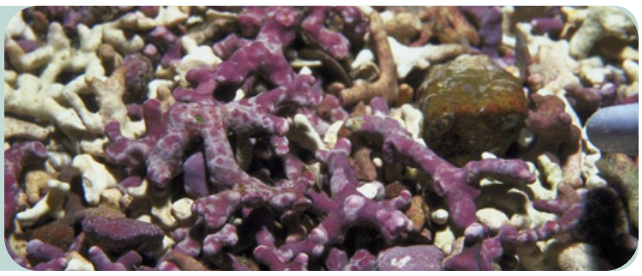

Horse mussel beds

Inchmarnock (Bute)

Designated to protect:

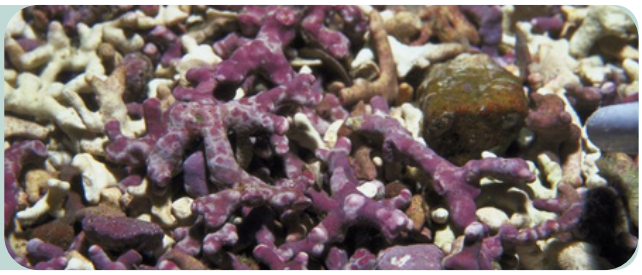

Maerl beds

Kyles of Bute

Designated to protect:

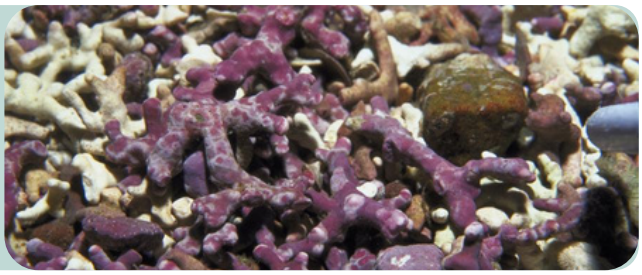

Maerl beds

Skipness Point (Kintyre)

Designated to protect:

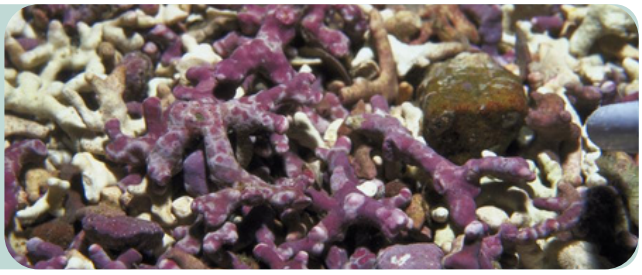

Maerl beds

Scalpsay Bay, Gallachan Bay, and Stravannan Bay (Bute)

Designated to protect:

Maerl beds
