

Inshore Marine Protected Area and Priority Marine Features Consultation

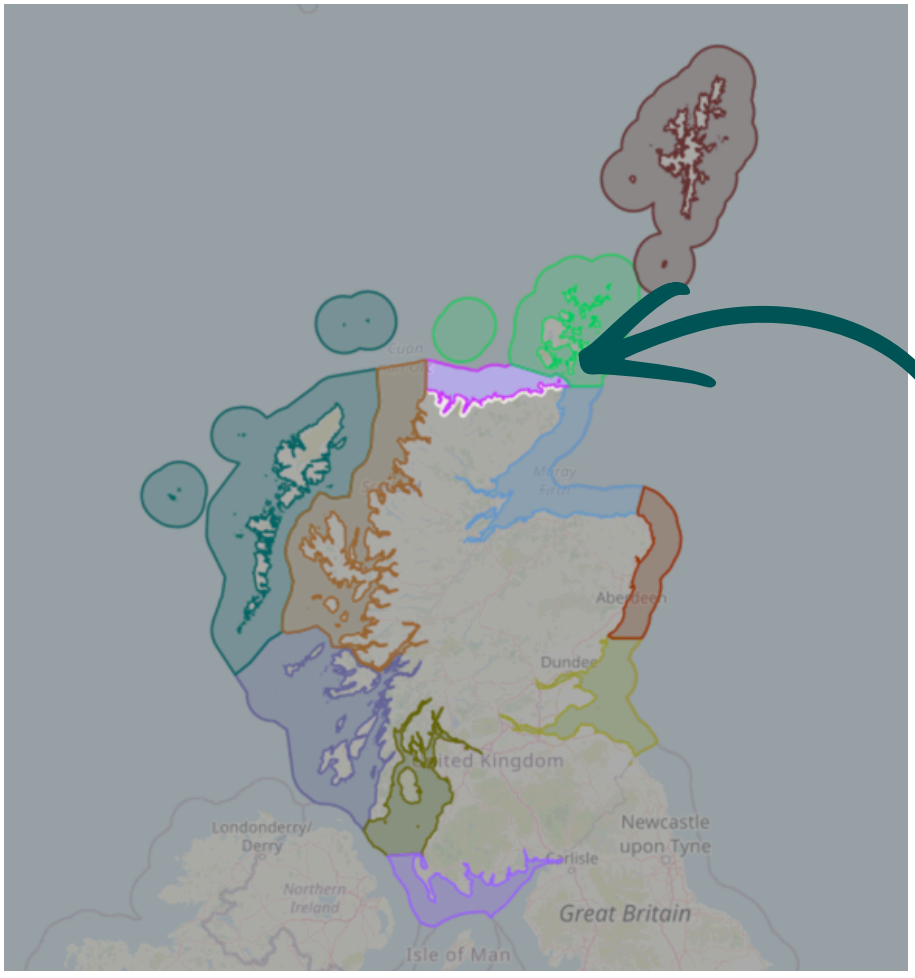

North Coast

11/11/2026

Introduction

Here you will find a briefing manual for the Proposed Fisheries Management Measures for Inshore Marine Protected Areas (MPAs) and Proposed Priority Marine Feature (PMF) Management Areas within the Outer Hebrides Region.

The North Coast Marine Region extends from Cape Wrath to Pentland Firth.

North Coast Marine Region

The Our Seas Coalition

The Our Seas coalition represents over 170 organisations, each with its own voice for the sea. We are united by a shared vision of greater protection for Scotland's inshore environment, however, individual members bring their own regional knowledge, priorities and perspectives on what that protection should look like. Consequently, our members will have their own individual views on the options presented within the consultation.

Our Seas encourage you to reach out to members in your area to learn more about their individual position.

The Consultation

After almost a decade of delay, the Scottish Government has finally launched its consultation on the future protection of inshore marine habitats and species. You can view it here.

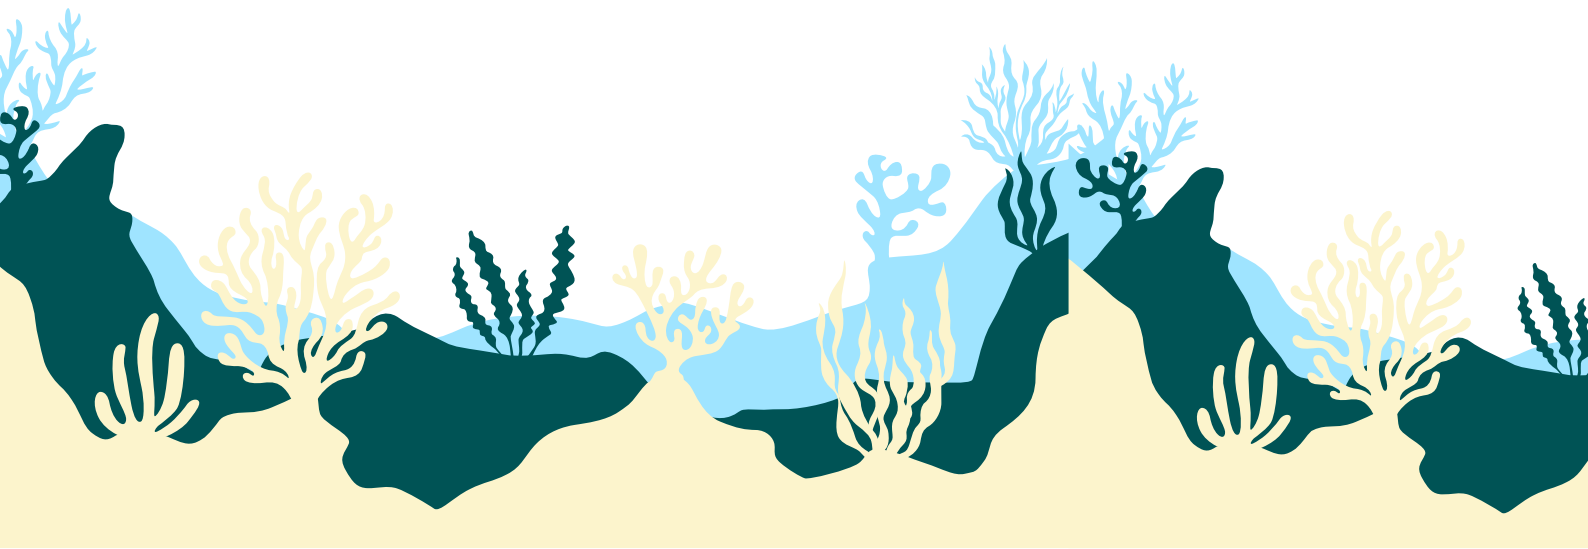

This is the chance for real protection to be implemented in Scotland's inshore waters after over 10 years of simply designation.

Within this consultation, the Scottish Government is asking for the public's opinion on proposed fisheries management measures for both sites and areas, where sites include: NCMPAs, SACs and SPAs and areas include locations where the 11 Priority Marine Features features have been identified outside MPAs.

On the North Coast, the consultation includes proposed fisheries management measures for:

0 NCMPAs | *0 SACs* | *2 SPAs* | *1 PMF areas*

In line with Our Seas asks, this briefing will outline the information on the 1 PMF area in this region For more information on other sites in your area, follow this link!

What protection can look like...

On the Isle of Arran, Scotland's only No Take Zone and wider South Arran MPA show how effective marine protection can be, with bottom trawling and dredging restrictions helping to protect and restore the seabed.

Research has found increases in king scallop and lobster numbers, greater marine biodiversity and healthier habitats, while supporting local communities through activities such as diving, snorkelling and commercial scallop diving. Go to COAST's website to read more.

PMF Areas Proposed Options

For the majority of **PMF areas**, 2 options will be proposed, in some cases, only 1 option is proposed.

Both options restrict bottom-towed fishing gear. The consultation is about the size of the area where these restrictions will apply.

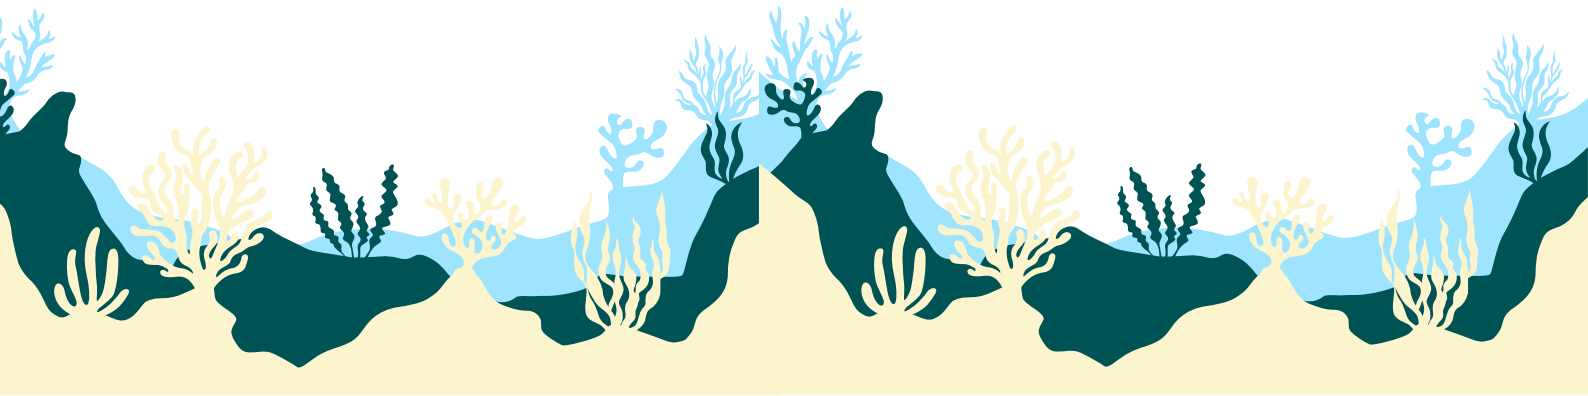

Option 1 - Smaller protected area

Option 2 – Larger protected area: Includes a buffer around the PMF, although the difference from Option 1 is small.

Other: If you disagree with both options, you can select ‘Other’ and explain your reasons in the comments box.

Both proposed options for are not adequate because:

- The areas are **not large enough** to provide real protection that is truly enforceable.
- Many populations of the 11 PMFs are **found outwith the proposed areas and therefore have no protection.**

Our Seas Coalition's Position PMFs

Neither of the proposed PMF options will provide sufficient protections; they do not go far enough to help restore the seabed, allow marine ecosystems to recover or to support sustainable fisheries. We believe at least 30% of Scotland's inshore should be protected from more damaging fishing activities like bottom trawling and dredging.

If you agree, you should submit a response, as follows;

- Call for the **strongest protections being offered (Option 2) at a minimum.** We then encourage you to also ask for at least 30% of Scotland's inshore waters to be protected from the more damaging fishing activities like bottom trawling and dredging.

- If you want to go into more detail, as part of those 30% protections, and in line with the Coalition's PMF Policy Position, you could ask for;
    - In the West Highlands Marine Region no dredging or trawling within 3 nautical miles of shore.
    - In the Outer Hebrides Marine Region no dredging or trawling within 1 nautical mile of shore.
    - As Shetland has it's own Regulatory Order, leave it to to resolve it's own protection.
    - **Throughout the rest of the Scottish Marine Regions, no dredging or trawling within 1 nautical mile or waters shallower than 45/50m.**

PMF Areas

In this section, we will summarise the PMF management area proposed in the North Coast. This is a location where populations of the 11 most vulnerable PMFs have been found outside the MPA network and where the Scottish Government are proposing protection from trawling and dredging. **Read the profile for each of these 11 PMFs here!**

If you agree that the proposals are not sufficient, answer Q194 - 195 as we have set out above.

Loch Eriboll (Durness)

Designated to protect:

Maerl beds
Horse mussel beds

Evidence from one of our members (SIFT)

A study by Burns et al found that 7 of the 11 most sensitive PMFs are found in Loch Eriboll, as follows:

- Blue mussel - two occurrences identified in 2019 survey
- Fanmussel aggregation - one occurrence in 2019 survey
- Horse mussel aggregations - nine occurrences in 2019 survey
- Maerl beds - twelve occurrences identified in 2019 survey
- Maerl or coarse shell gravel with burrowing sea cucumbers- one in 1970 survey
- Northern sea fan and sponge communities - four occurrences in 2015 survey
- Seagrass beds - one occurrence in 1994 survey

In contrast the consultation appears to draw only from the 1986 study which found maerl and horse mussel. This is clearly a major oversight and is not acceptable.

Regional Members List

Aberdeenshire
- Ellon Sub Aqua Club
- OpenRoad Ltd
- Project Media
- Saltwater Life
- Shark and Skate Scotland

Angus
- Esk Rivers and Fisheries Trust

Argyll & Bute
- Argyll District Salmon Fishery Board
- Argyll Fisheries Trust
- Carna Coast and Communities
- Coastal Connection
- Community Association of Lochs and Sounds (CAOLAS)
- Conor Ryan Photography
- Craignish Restoration of Marine and Coastal Habitat (CROMACH)
- Eda Frandsen Sailing Ltd.
- Friends of the Sound of Jura
- Heart of Argyll Wildlife
- Kilchoan Estate
- Kyles Coastal Community
- Loch Visions
- Lochaber Sub Aqua Club
- Lochnell Oysters
