

Inshore Marine Protected Area and Priority Marine Features Consultation

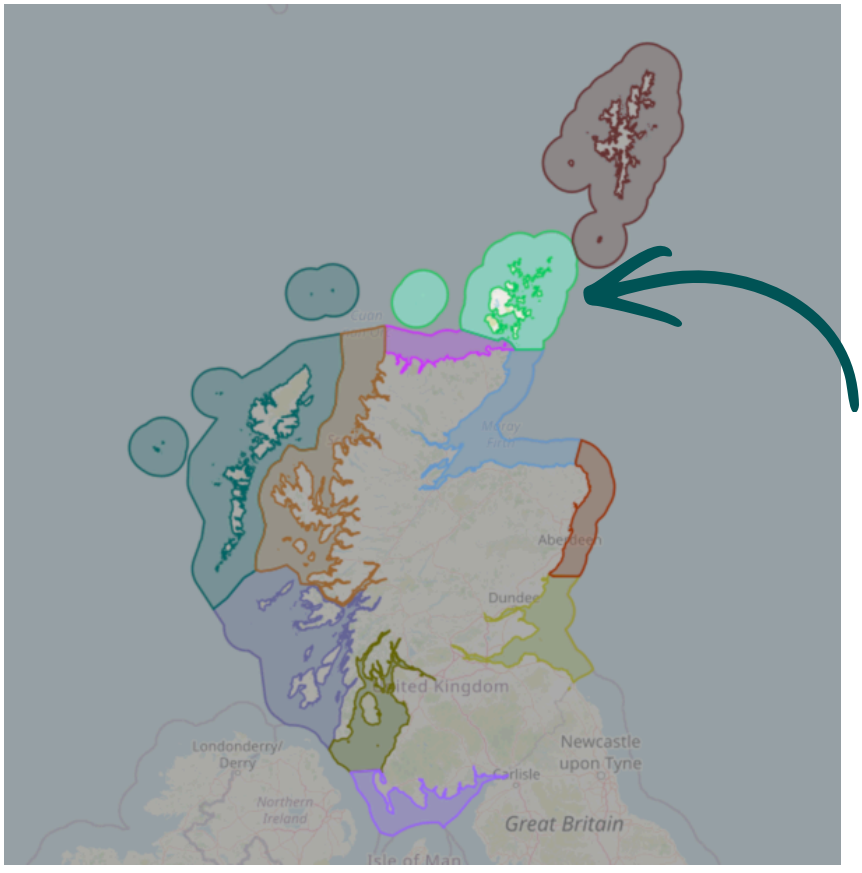

Orkney Islands

11/11/2026

Introduction

Here you will find a briefing manual for the Proposed Fisheries Management Measures for Inshore Marine Protected Areas (MPAs) and Proposed Priority Marine Feature (PMF) Management Areas within the Orkney Islands Marine Region.

The Orkney Islands marine region extends around the Orkney Islands, situated immediately north of the Scottish mainland. Strong tidal currents that are some of the fastest in the world, reaching over 8 m/s, run through the Pentland Firth, between the Scottish mainland and the Orkney Islands.

Orkney Islands Marine Region

The Our Seas Coalition

The Our Seas coalition represents over 170 organisations, each with its own voice for the sea. We are united by a shared vision of greater protection for Scotland's inshore environment, however, individual members bring their own regional knowledge, priorities and perspectives on what that protection should look like. Consequently, our members will have their own individual views on the options presented within the consultation.

Our Seas encourage you to reach out to members in your area to learn more about their individual position.

The Consultation

After almost a decade of delay, the Scottish Government has finally launched its consultation on the future protection of inshore marine habitats and species. You can view it here.

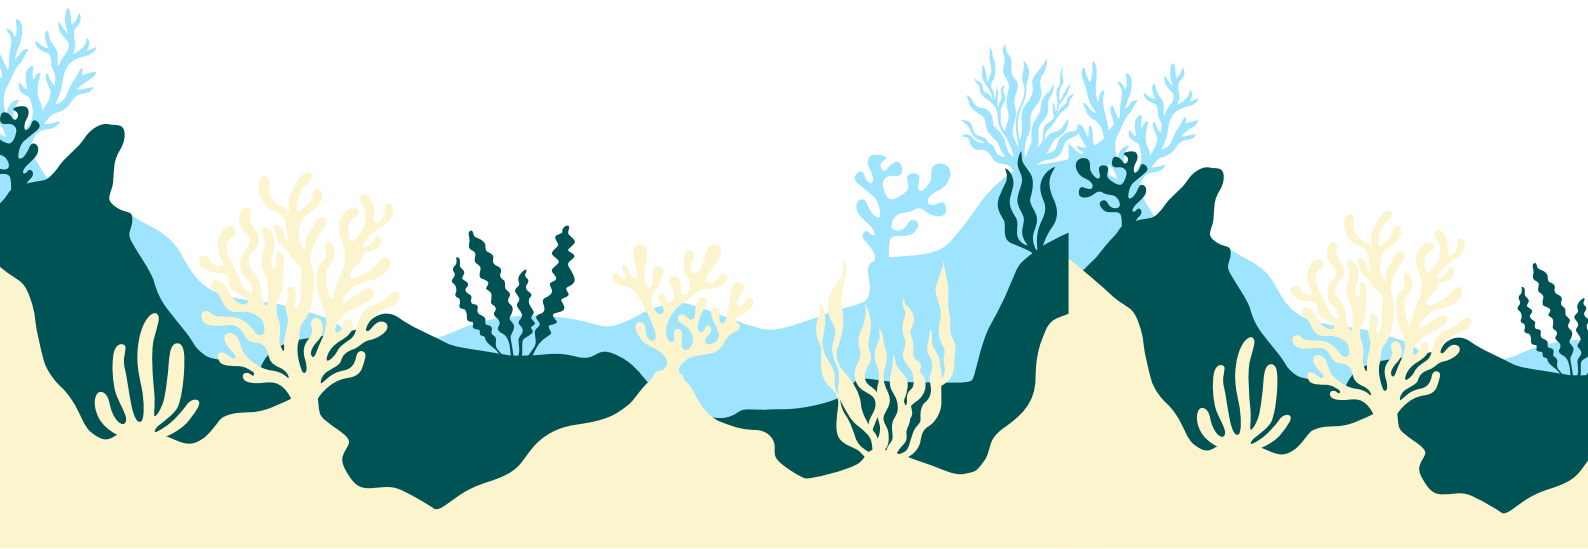

This is the chance for real protection to be implemented in Scotland's inshore waters after over 10 years of simply designation.

Within this consultation, the Scottish Government is asking for the public's opinion on proposed fisheries management measures for both sites and areas, where sites include: NCMPAs, SACs and SPAs and areas include locations where the 11 Priority Marine Features features have been identified outside MPAs.

In the Orkney Islands, the consultation includes proposed fisheries management measures for:

1 NCMPAs | *1 SACs* | *9 SPAs* | *9 PMF areas*

There are no sites with a seabed feature designated to be protected so this briefing just focuses on the 9 PMF areas. For more information on other sites in your area, follow this link!

What protection can look like...

On the Isle of Arran, Scotland's only No Take Zone and wider South Arran MPA show how effective marine protection can be, with bottom trawling and dredging restrictions helping to protect and restore the seabed.

Research has found increases in king scallop and lobster numbers, greater marine biodiversity and healthier habitats, while supporting local communities through activities such as diving, snorkelling and commercial scallop diving. Go to COAST's website to read more.

PMF Areas Proposed Options

For the majority of **PMF areas**, 2 options will be proposed, in some cases, only 1 option is proposed.

Both options restrict bottom-towed fishing gear. The consultation is about the size of the area where these restrictions will apply.

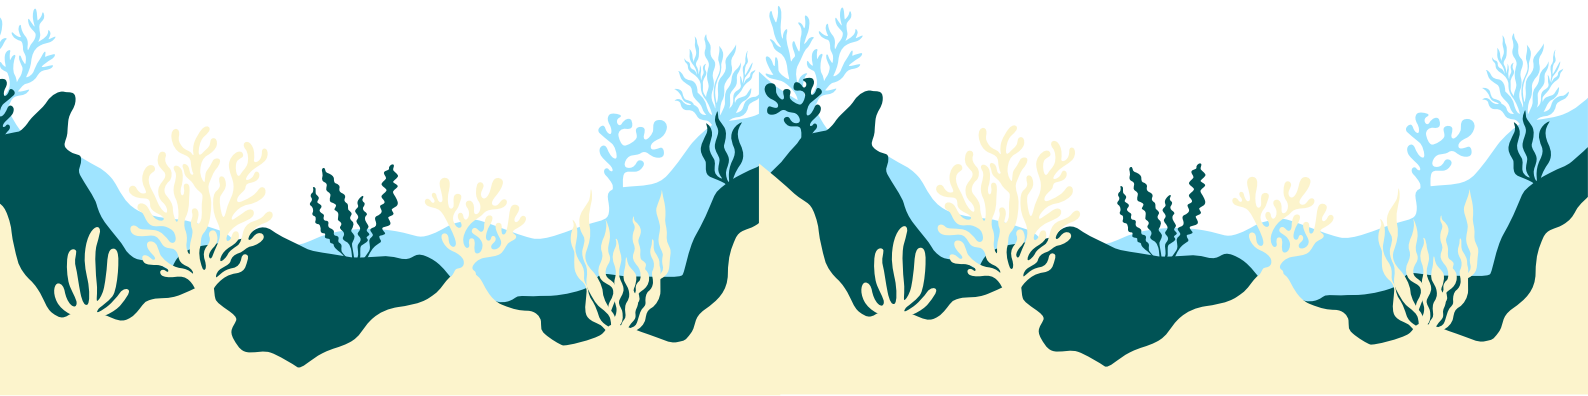

Option 1 - Smaller protected area

Option 2 – Larger protected area: Includes a buffer around the PMF, although the difference from Option 1 is small.

Other: If you disagree with both options, you can select ‘Other’ and explain your reasons in the comments box.

Both proposed options for are not adequate because:

- The areas are **not large enough** to provide real protection that is truly enforceable.
- Many populations of the 11 PMFs are **found outwith the proposed areas and therefore have no protection.**

Our Seas Coalition's Position PMFs

Neither of the proposed PMF options will provide sufficient protections; they do not go far enough to help restore the seabed, allow marine ecosystems to recover or to support sustainable fisheries. We believe at least 30% of Scotland's inshore should be protected from more damaging fishing activities like bottom trawling and dredging.

If you agree, we suggest you submit a response as follows:

- Support **Option 2 at a minimum**. We then encourage you to also ask for at least **30% of Scotland's inshore waters to be protected** from the more damaging fishing activities like bottom trawling and dredging, in line with the coalition's ask of a **modern inshore limit adapted to the needs of each Scottish Marine Region.**

- If you want to go into more detail, Our Seas suggests this could look like:
    - In the West Highlands Marine Region no dredging or trawling within 3 nautical miles of shore.
    - In the Outer Hebrides Marine Region no dredging or trawling within 1 nautical mile of shore.
    - As Shetland has it's own Regulatory Order, leave it to to resolve it's own protection.
    - Throughout the rest of the Scottish Marine Regions, no dredging or trawling within 1 nautical mile or waters shallower than 45/50m.

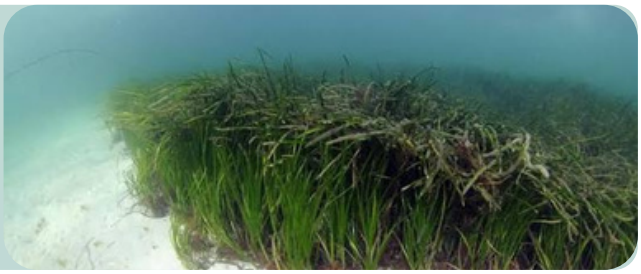

PMF Areas: Qs 249 - 281

In this section, we will summarise the PMF management areas proposed for the Orkney Islands. These are locations where populations of the 11 most vulnerable PMFs have been found outside the MPA network and where the Scottish Government are proposing protection from trawling and dredging. **Read the profile for each of these 11 PMFs here!**

If you agree that the proposals are not sufficient, answer Qs 249 - 281 as we have set out above.

Bay of Tuquoy, Westray (Orkney)
Designated to protect:

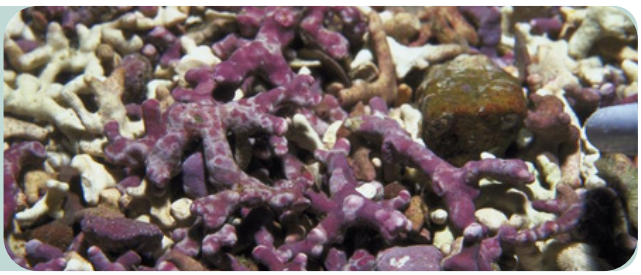

Seagrass beds

Bay of Swartmill (Orkney)

Designated to protect:

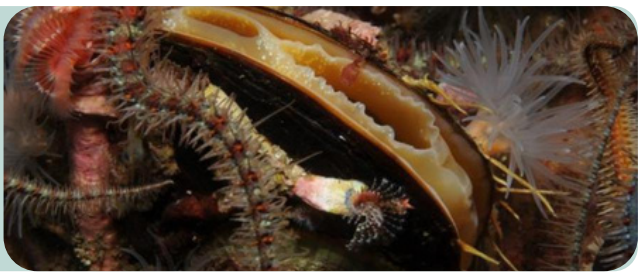

Maerl beds

Copinsay (Orkney)

Designated to protect:

Horse mussel beds

Eday, Sanday, and Stronsay (Orkney)

Designated to protect:

Horse mussel beds,
Maerl beds,
Seagrass beds

Hoy Sound (East) to South Walls (Orkney)

Designated to protect:

Flame shell beds,
Horse mussel beds
Maerl beds,
Fan mussel aggregations
Seagrass beds

Hoy Sound (Orkney)

Designated to protect:

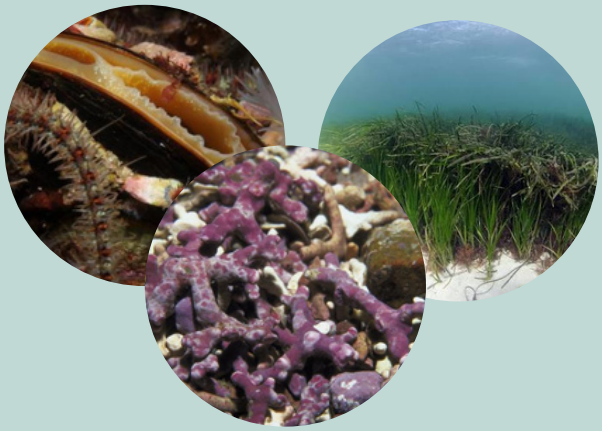

Maerl beds
Seagrass beds

Orkney Sounds and Firths (South)

Designated to protect:

Horse mussel beds,
Maerl beds,
Seagrass beds

Papa Westray, South (Orkney)

Designated to protect:

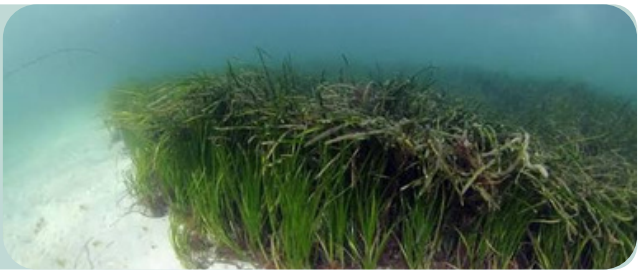

Maerl beds
Seagrass beds

Widewall Bay (Orkney)

Designated to protect:

Seagrass beds
